

Press Release

2degrees and the Stockholm International Water Institute (SIWI) collaborate to deliver 2011 World Water Week online.

Date: 16.08.2011

Following last year's success the Stockholm International Water Institute (SIWI) and 2degrees have extended their collaboration to deliver a full program of online events during 2011 World Water Week.

Each year, at World Water Week in Stockholm, SIWI bring together experts and decision makers from leading NGOs, Governments and Corporations from around the world to exchange ideas, foster new thinking and develop solutions to the planet's most urgent water-related issues.

Organizations including WWF, UN-Water, UNESCO, UNEP, World Water Council, International Water Association, Global Water Partnership, The World Bank, Coca-Cola and many others are taking part in the events covered by SIWI and 2degrees.

"2degrees helps those that can't get to Stockholm keep-up-to-date and contribute to the debate as it happens live from the conference floor. It's also a great resource for those attendees that either missed a session or want a copy of the presentation after the event has finished"

- Britt-Louise Andersson, Communications Director, Stockholm International Water Institute

All members of 2degrees will have the opportunity to ask questions and get answers via:

- LIVE webinar sessions with speakers from world leading organizations on topics including:
 - Corporate Water Risk Management
 - Sustainability of Water Footprints: From Assessment to Strategic Response
 - Understanding the Opportunities for Entrepreneurs in getting Sustainable Services to the Poor
 - Water and Food Security: Call for Solutions
 - Enabling Effective Action: Adaptation across Political, Social, and Institutional Boundaries
- Guest blogs from Daniel Yeo, Senior Policy Analyst, Water Security and Climate Change, **WaterAid**; Maeve Hall, Assistant Manager, Climate Change & Sustainability Services, **Deloitte** and David Tickner, Head of Freshwater Programmes, **WWF-UK**.
- Recordings of the opening and closing plenary sessions;
- Regular opinion pieces from Marty Matlock, Area Director, **Center for Agricultural & Rural Sustainability** and Professor of Biological & Agricultural Engineering, **University of Arkansas**.
- Forum discussions designed to address the big issues taken from the conference floor by 2degrees Water Risk & Strategy Community Manager, [Izabela Stacewicz](#).

2degrees believe, for all those who cannot make it to Stockholm, this is an unrivaled way to take part in the world's leading water event.

Date of issue - 09 August 2011
